

## Important information for farmers & herders

# VACCINATION AGAINST EAST COAST FEVER

### Why vaccinate against East Coast Fever (ECF)?

- > East Coast Fever is a serious disease that can kill 30% to 60% of your cattle. The ECF vaccination will bring this down to approximately 2%.
- > Safe and effective ECF vaccine, approved by the Director of Veterinary Services, is available in Kenya now from official distributors.
- > One injection protects your animal against ECF for life.
- > The vaccine is cheaper than treating animals.
- > It saves cattle from ECF, increase production and improve livelihoods.

### Why continue to dip & spray against other tick-borne disease?

- > For many years, farmers and herders have dipped and sprayed but still lose many animals to ECF.
- > The ECF vaccine is very effective against ECF but it does **not** protect against **other** tick-borne diseases.
- > The best method is to vaccinate against ECF and to dip and spray against **other** diseases.

### Where can I get the ECF Vaccine?

**VetAid:** Dr Mpilei David on 0725330278 and Dr Gabriel Turasha on 0721473926

**BMC/Agrihaus:** Dr Rawlynce Bett on 0726681441

**KDFF:** Mr David Bett on 0725799246

**Sidai Africa Ltd:** Dr Rezin Odede on 0722628472, 0701225949, 0703491296

**ECF Vaccination + Spraying and Dipping =  
Better protection against Cattle Tick Borne Diseases**
