Farmers in East Africa can now easily access the East Coast Fever vaccine

Thursday, September 18, 2014 / The Standard

The dream behind the bright eyes of Stephen Kambiri and Mario Marah is to show his animals new friends in Eldoret. Clearly proud, he proclaims about this land and these animals and its role in his life. Approachable for the quality of the cattle is reflected in the broad smile and friendly demeanor of fellow farmers. "We are not only farmers, we are also community leaders. Our goal is to support the livelihoods of small-scale farmers. This is why we established the East Coast Fever (ECF) campaign in Eldoret," he says. The campaign is a key aspect of his Marshall's strategy to protect his livestock through ECF. The campaign is aimed at raising awareness about the disease and educating farmers on how to prevent it in their herds.

"I encourage everyone to use the vaccine," Mario Marah, smiling as he speaks, adds that it is vital for the success of the campaign. "ECF is a disease that affects cattle in East Africa and parts of Central Asia, impacting 11 countries and putting millions of cattle at risk."
