

Meet the best
fund manager
the world has
ever known

Protecting Livestock – Improving Human Lives

...and become part of the process

Vaccines for the major livestock diseases affecting small-scale farmers in Africa and Asia can deliver a **return on investment** for the farmer of around **1500%**

For the world's **richest**

Wealth is typically held in **investment portfolios**. Cash, bonds, equity and property – all managed to optimise risk and return.

For the world's **poorest**

Wealth is typically held in **livestock**. Cattle, sheep, goats & chickens – represent the **most valued assets** for around **900 million people** in the developing world.

At GALVmed, we believe that livestock vaccination is one of the most **effective** forms of **asset management and wealth creation** ever

Without vaccination, disease kills approximately **25%** of small-scale farmers' animals in the developing world.

A vaccine will typically cost the farmer only a few cents and provide **effective immunity** against major livestock diseases.

But the vaccines for major livestock diseases in Africa and Asia are often **NOT** available

GALVmed, by developing new livestock vaccines, can transform the situation – in a truly **sustainable and market driven** process

We are a **not-for-profit** organisation with a **unique** business model. **Nothing is given away**, vaccines are sold at their market price and the poor's assets – their investment portfolios – are protected.

Make a
difference

A little of your **time and talent** could protect some of the most precious assets of people in poverty
